

I only listen to XM radio, I would rather pay my \$10 a month and not have to hear the non stop commercials. I also enjoy listening to songs as they were intended to hear, some of the stations on XM's programming plays music uncut, and unedited. Also with the ability to get Instant Traffic & Weather, how can you compair FM to Satellite. FM needs to get with the technology, why should I have to wait for them to give me Traffic updated when I can get it when ever I want with XM.
